

High Speed Steels

The cutting edge:

BÖHLER high speed steels are used for machine tools such as drills, hobs and broaching tools and in some cold forming applications. The properties required here are wear resistance, hot hardness and toughness which prevents chipping of cutting edges. This guarantees high tool life, low maintenance and down times, and ensures a reproducible production process. Our high performance powder metallurgical high speed steels are a speciality. They are the mainstay in this demanding market segment.

BÖHLER high performance special steels: a cut above the rest.
